

HEALTHCARE DATA SHEET

H2O.ai

INDUSTRY

Sovereign AI for Healthcare

Health systems do not buy AI, they buy back the hours clinicians and staff lose to coding, prior auth, and documents no one has time to read. AI that runs inside your walls, cited and explainable, with PHI that never leaves your control.

PROVIDERS | PAYERS | LIFE SCIENCES

PROVEN IN PRODUCTION

25,000+

staff hours saved at UCSF Health

8,000

employees assisted in real time at NIH

12 hrs

early-warning lead time on patient risk at a large healthcare provider

WHY H2O

Why health systems choose H2O

Run AI anywhere, sovereign by design	You own your agents, models, data, and results, and run them in any cloud, on-premises, or air-gapped.
PHI never leaves your walls	Run air-gapped and sovereign on top of Epic and your existing systems, with an audit trail your compliance team accepts.
Cited and explainable	Every finding is cited to the rule or clause behind it, and every model decision stays explainable and auditable.
Proven in regulated production	More than a decade running AI in regulated production.

HEALTHCARE DATA SHEET

SOLUTIONS

Key problems we solve for healthcare

Fraud prevention

Care gets delivered, then the money fights to catch up: coding that misses the rule, prior auths that stall, and denials climbing faster than the team can appeal. Read the chart against the rules that govern payment, and get paid correctly for the care you already gave.

CODING ACCURACY | PRIOR AUTHORIZATION | DENIALS & APPEALS | REVENUE INTEGRITY

54%

of private-payer denials overturned on appeal

PREMIER SURVEY

Care team support

Nurses, staff, and patients ask the same questions every week, and the answer sits in a policy, protocol, or contract nobody has time to search. H2O AI Super Agent answers from your own documents with the clause cited, air-gapped where required, so your experts stop being a search engine.

NURSE & STAFF SUPPORT | POLICY & PROTOCOL LOOKUP | PATIENT QUESTIONS | ROLE-BASED ACCESS

8,000

employees assisted in real time

NIH

Agentic automation

Invoices pile up against purchase orders no one can match, while the models that flag sepsis or a readmission drift out of date. Turn the documents into something a system can act on, and keep the models scoring on current data.

INVOICE & PO MATCHING | DOCUMENT PROCESSING | SEPSIS & HAI RISK | READMISSION RISK

6 hrs

between risk rescores at a large healthcare provider

CUSTOMER QUOTE

> We recognize them 12 hours before they experience the deterioration.

Principal Statistician
Large healthcare provider

RUNS WHERE YOUR DATA LIVES

ON-PREMISES | PRIVATE CLOUD | AIR-GAPPED | HIPAA
